Shubham Chand

Backend & Distributed Systems Engineer | Cloud & Fintech

+91-9101095463 | shubhamchand0103@gmail.com

Professional Summary

Software engineer with **7+ years of experience** across cloud infrastructure, fintech, and enterprise software. Builds **AI-assisted VM diagnostics**, cloud-reliability tooling, and distributed financial systems. Core Compute **Engineering Excellence Award** recipient; helped deliver hackathon-winning **VM Story to production in 3 weeks**.

Professional Experience

Microsoft | *Software Engineer II* 2024 – Present

Azure Core Compute | Availability Platform (APlat)

- **VM Story — hackathon to production:** Built the complete implementation, infrastructure-as-code setup, and CI/CD pipelines for this **Microsoft Hackathon 2026 winner**. Following leadership funding, took the project to **production with the team in 3 weeks**.
- **AI-assisted diagnostics:** Integrated AI summaries of **logs from multiple sources** into VM Story for quick overviews of VM issues. In a test on **one actual priority-customer incident**, identified the root cause **in seconds versus hours** of incident-bridge investigation.
- **Cloud reliability:** Reduced **P99 node recovery time from 33 to 25 minutes** (approximately **24%**) for communication failures between nodes and the cluster-level fabric controller.
- **Incident attribution:** Reduced unattributed communication-failure incidents from **70% to 33% of weekly cases** by automating incident-management (IcM) ticket routing to responsible teams.
- **Deployment enablement:** Onboarded **Hawkeye to EV2** for region-agnostic deployment. Tested changes in **France and Germany national-cloud environments** and completed template-driven Hawkeye buildout in **1 week**. Built a **buildout skill** that explains new-cloud buildouts to new engineers, provides detailed step-by-step guidance, and tracks progress.
- **Application performance:** Upgraded Orb's framework and dependencies, reducing startup time by **50%** and build-and-release time from **55 to 30 minutes**, while improving responsiveness and usability.
- **Test automation:** Increased FcShell code coverage from **12% to 79%** and introduced a stable-build feature that restricts user updates to stable builds validated by an automated smoke-testing framework.

Fi Money | *Senior Software Engineer* 2020 – 2024

Fintech | Investing Platforms & Financial Automation

- **US-stock investing:** Co-developed a US-stock investing platform for Indian investors in a **five-engineer team**; collaborated with **banking and brokerage partners** to finalize contracts and build the order service. The live product onboarded **20,000 investors in 3 months** and supported approximately **1,200 trade orders daily**, representing approximately **US$20,000 in daily transaction volume**.
- **Real-time market data:** Implemented stock-price distribution using **WebSockets and gRPC streams**, consuming a **single vendor connection** and fanning updates out to all active app connections requesting live prices.
- **Resilient services:** Built end-to-end **stock-order and wallet-order flows using Temporal**, a workflow-as-code service, supporting resilient execution through transient failures.
- **Shared automation:** Developed platform-level rules-engine support for mutual fund systematic investment plans (SIPs), recurring payments, and reminders.

Professional Experience — Continued

Ameyo | *Software Engineer I & Software Engineering Intern* 2018 – 2020

Enterprise Software | Contact-Center Solutions

- **Agent productivity:** Enhanced dialing algorithms to improve contact-center agent productivity.
- **Access management:** Developed a maker-checker user-access management tool with a **dual-approval workflow** for agents and supervisors across multiple contact centers.
- **Video-KYC archival:** Built an archival tool for video know-your-customer (KYC) calls, supporting monitoring and quality analysis.

Technical Skills

Languages: Go, Java, C#, Python, C++, PowerShell

Backend & distributed systems: Microservices, system design, Temporal, workflow-based orchestration

APIs & communication: gRPC, Protocol Buffers, REST, WebSockets

Databases & querying: PostgreSQL, CockroachDB, MySQL, Kusto Query Language (KQL)

Cloud platforms & runtimes: Microsoft Azure, AWS, .NET, Node.js

AI engineering: AI application integration, multi-source log summarization, AI-assisted root-cause analysis; AI-agent-assisted development with safety safeguards

Engineering practices: Infrastructure as code, CI/CD, automated smoke testing

Education

Lovely Professional University 2015 – 2019

B.Tech, Computer Science & Engineering | **CGPA: 8.9**

Professional Recognition

- **Engineering Excellence Award — Microsoft Core Compute:** For **VM Story and Hawkeye buildout**; quarterly Core Compute-level nomination process.
- **Fi-Star Award — Fi Money:** Recognized for the record-time launch of the US-stocks offering to friends-and-family users.
- **Above & Beyond Award:** Recognized for ownership in delivering the video-KYC archival tool.

Certifications

- **CodeChef Certified Data Structure & Algorithms Programme (CCDSAP).**
- **NPTEL — Design & Analysis of Algorithms:** Elite certification; **84%**.

Achievements & Additional Recognition

- **Code Dangal: 3rd among 700+ teams**; national competitive programming contest, TIT Bhopal; hosted on HackerEarth.
- **Code Apocalypse 3.0: 6th among 100+ teams**; programming contest by Team Cypher, LPU.
- **LPU-NEST Scholarship: Top 10%** in the 2015 entrance examination.
- **AMCAT:** Certificate of Recognition from Aspiring Minds.
